

DanMedical enables patients in remote locations, such as topside on rigs and shipping vessels, and in Hyperbaric and Saturation Diving Chambers to be connected to onshore medical doctors. Our service is supported by D-MAS Remote and D-MAS HyperSat, complete clinical diagnostic and monitoring devices.

Vital patient information can be communicated in real-time or via encrypted email from any online location allowing unprecedented medical support to the most remote locations, including offshore. It is used for health surveillance and to manage all medical interventions preventing unnecessary medivacs or rerouting.

As the go-to device for medics, D-MAS enables the user to log consultations to a database, record patient details, perform diagnostic tests, produce digital diagnostic reports with clinical interpretation, monitor vital signs and capture a variety of live images on one self-contained device.

The system can be loaded with your own suite of software tools including Desktop Sharing, Video Conferencing and Email.

Functions include:

Masimo SET Pulse Co-Oximetry	Resting ECG	Extended ECG
Blood Pressure	Spirometry	Temperature
Digital Imaging	OtoScope*	DermoScope *
Digital Video LaryngoScope*	IrisScope*	DentalScope*
Remote Medic Consult Database*	SpCO* SpHb* SpMET*	Audiometry*

*optional extra

D-MAS is an incredibly powerful tool to deliver a full range of remote healthcare diagnostic and monitoring support options.

D-MAS HyperSat

The remote healthcare telemedicine solution for Hyperbaric and Saturation Diving Chambers. It has all the functionality of the D-MAS Remote but is intrinsically safe for use in pressurized environments.

To support compliance with OGP 411, D-MAS HyperSat measures heart rhythm, blood pressure, SpO2 and temperature and is able to transmit this information from inside the chamber to a doctor remote from the worksite, such that the information can be viewed in real time.

Wireless communications enable live images and monitoring to any online location giving unprecedented levels of health surveillance.

Tested in Heliox to 450msw and with elevated oxygen to 18 msw, it delivers a full range of remote healthcare diagnostic and monitoring support options with built in clinical interpretation including: Resting ECG, Extended ECG, Masimo SET Pulse Co-Oximetry, SpCO, SpHb, SpMET, Blood Pressure, Temperature, Spirometry, Digital Imaging, a range of Digital Video Scopes and a Remote Medic Consult Database.
